

Flexi-Post are specially designed to withstand multiple high speed impact. They stay in place, providing continuity in a work zone & help reducing maintenance cost. Their installation reduces injuries and vehicle damage resulting from collision with Side Post or Rigid Delineator post on the roads. Their round base is generally bolted to the ground. They can also be attached to the specially made heavy rubber pads - which are generally used for temporary installations for diversion of traffic on the roads. Rigid post with reflective vertical 2mm thick aluminium panel (Modular type) for Information / Warning / Mandatory / Safety / hazardous / prohibitions signs etc.
